NanoLumens Announces Premier Dealer Agreement with Video Visions, Inc.

ATLANTA, Ga., March 9, 2010—NanoLumens, a display technology innovator that designs and manufactures thin, flexible, lightweight digital video displays, announced its first Dealer Agreement with Video Visions to assist in marketing, sales and distribution.

NanoLumens recently introduced the world's first 112" flexible video display, weighing less than 90 pounds and only 1" thin. NanoLumens developed its flexible technology to fill the need for large displays that are thinner, lighter, less power hungry and easier to install. Custom design options include virtually any size or shape of display. With flexible displays, designers can also wrap large columns or follow the contours of a curved wall.

Video Visions, Inc., headquartered in Philadelphia, is a leading audio visual systems integrator and a pioneer in the professional A/V market and for 37 years has provided custom display solutions for its clients.

"We are thrilled to be announcing our first Dealer Agreement with Video Visions, Inc. just as we launch our first flexible display product," said NanoLumens CEO Richard Cope. "We are honored to be establishing a strategic partnership with a leader in the professional AV market who has vast experience in the industry."

"The partnership with NanoLumens allows us to offer a unique, flexible display product to our customers as we strive to provide tailored, turn-key solutions to suit their needs," said Mary Ellen Milanese-Distasio, President of Video Visions, Inc. "NanoLumens' flexible technology will allow our team to offer customized digital display solutions never before available."

About NanoLumens, Inc.: NanoLumens has combined a comprehensive portfolio of patented technologies to create thin, flexible, lightweight digital video displays. With over 50 patents issued or pending, the firm's technical advisors include some of the brightest leaders of the global display industry. The company's headquarters, engineering and contract manufacturing facilities are located in the metro Atlanta region.

About Video Visions, Inc.: Founded by Arthur A. Milanese in 1973, Video Visions, Inc. designs, sells, installs and services presentation systems for professional audio visual applications. The company has offices in Philadelphia, New York and Orlando. Video Visions, Inc. is a solutions based systems integrator and is proud to add NanoLumens to the products the firm currently provides its clients, including offerings from Christie MicroTiles, Panasonic Professional Display Corporation, Orion, Planar, Sharp, Toshiba, LG & Sanyo.
